

Scissor fork-lift with integrated weighing system from proven 3000 series

A truly unique product from Schneider, the SHW-300 is only available in 304 stainless steel. Ideal for solving ergonomic applications where operators would need to bend over, or for filling operations where additional lifting is required.

The battery-driven synchronized telescopic hydraulics ensure constant lifting power at any lift height regardless of load.

For further functions, e.g. dosing or filling, this modular concept offers numerous individual possibilities (such as controlling a filler system)

A variety of interfaces are provided for connecting printers, EDP, Ethernet connection, etc.

Flexible work through swiveling backlit terminal with manual tare input and alphanumeric keyboard.

Specification:

Dimensions:	46.8" L X 21.25" W or 26.7" W x 47.24" H
Minimum Height:	3.54"
Maximum height:	31.8"
Weighing range:	4-1000 kg / 9-2200 lb
Resolution:	0.2 kg / 0.44 lbs
Charging device:	in-built 110 VAC
Castor wheels:	Dual White non-marking Nylon
Load rollers:	White non-marking Nylon
Weight:	265 kg

Available Options:

Non-marking wheels, pedal for locking brake, replacement battery, stainless steel ball bearings, interface for dosing valve, FDA-approved oil, low-temperature oil to -50°C and many more.
